

## **PACE Strategy Document – Employee Turnover Analysis**

**Project Title:** Predicting Employee Turnover to Improve Retention at Salifort Motors

### **Plan Stage**

Audience: Senior leadership and HR leaders at Salifort Motors.

Objective: Predict employee turnover and identify key drivers to reduce attrition costs.

### **Analyze Stage**

EDA focused on satisfaction, workload, promotions, and tenure.

Patterns showed higher turnover among overworked and under-promoted employees.

### **Construct Stage**

Built logistic regression and random forest models.

Evaluated using recall and ROC-AUC to prioritize identifying at-risk employees.

### **Execute Stage**

Key drivers: satisfaction, workload, promotion history.

Recommendations include workload balancing and clearer promotion pathways.

### **Final Reflection**

This project demonstrates ethical, interpretable predictive analytics for HR decision-making.
